**optoNCDT** // Laser displacement sensors (triangulation)

-  **Nine models with measuring ranges from 4 mm to 100 mm**
-  **Sensor head and separate controller**
-  **Up to 100 kHz (-3dB) true analog frequency response**
- INTER FACE** **Analog outputs (U/I) Ethernet**

Analog laser triangulation sensors of the optoNCDT 1610 and 1630 series are designed for extremely fast measurement processes. Equipped with a PSD array, the sensors automatically adapt to the reflection factor of the measurement object enabling measurements even on changing surfaces.

The LD 1610 series achieves a frequency response of 10 kHz (-3dB) while the LD 1630 series is suitable for measurements up to 100 kHz (-3dB).

Equipped with analog interfaces (current, voltage) and an optional Ethernet interface, the controller can be easily integrated into diverse systems.
